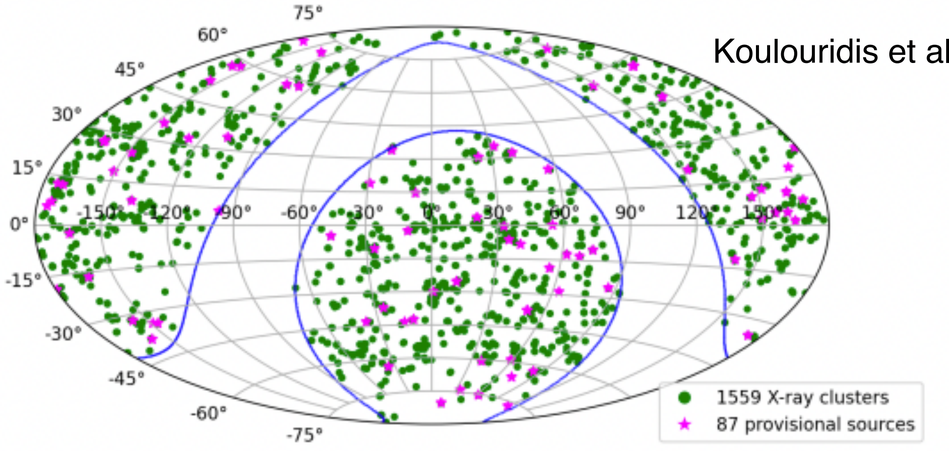
Cosmic filaments around XCLASS clusters using SDSS

SDSS vs XCLASS

XCLASS



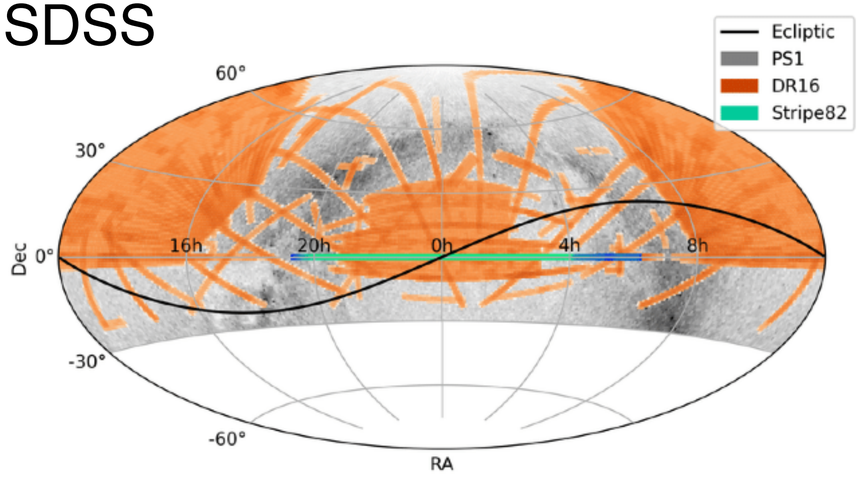
Koulouridis et al. (2021)

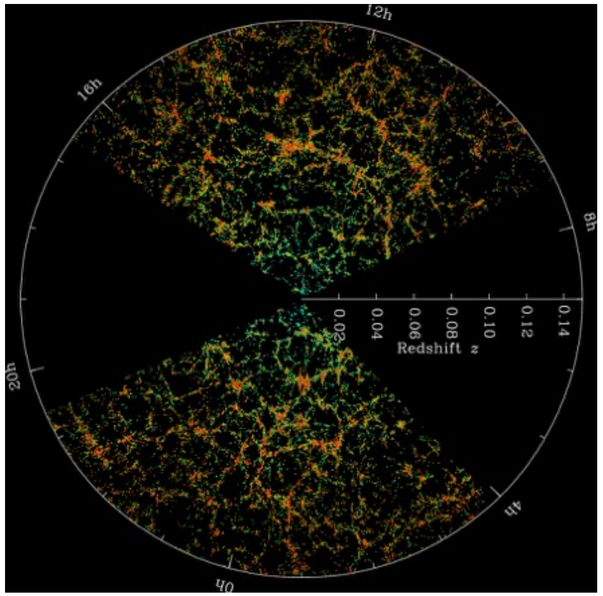
- X-ray detected clusters
- 982 spectroscopically confirmed clusters

We select a sub-sample of XCLASS clusters in the SDSS footprint at $z < 0.1$

80 cluster sample with masses $13 < \log \frac{M_{\rm vir}}{M_\odot} < 15.3$

SDSS





- Cosmic filaments detected with DisPerSE by K. Kraljic (ObAS)
