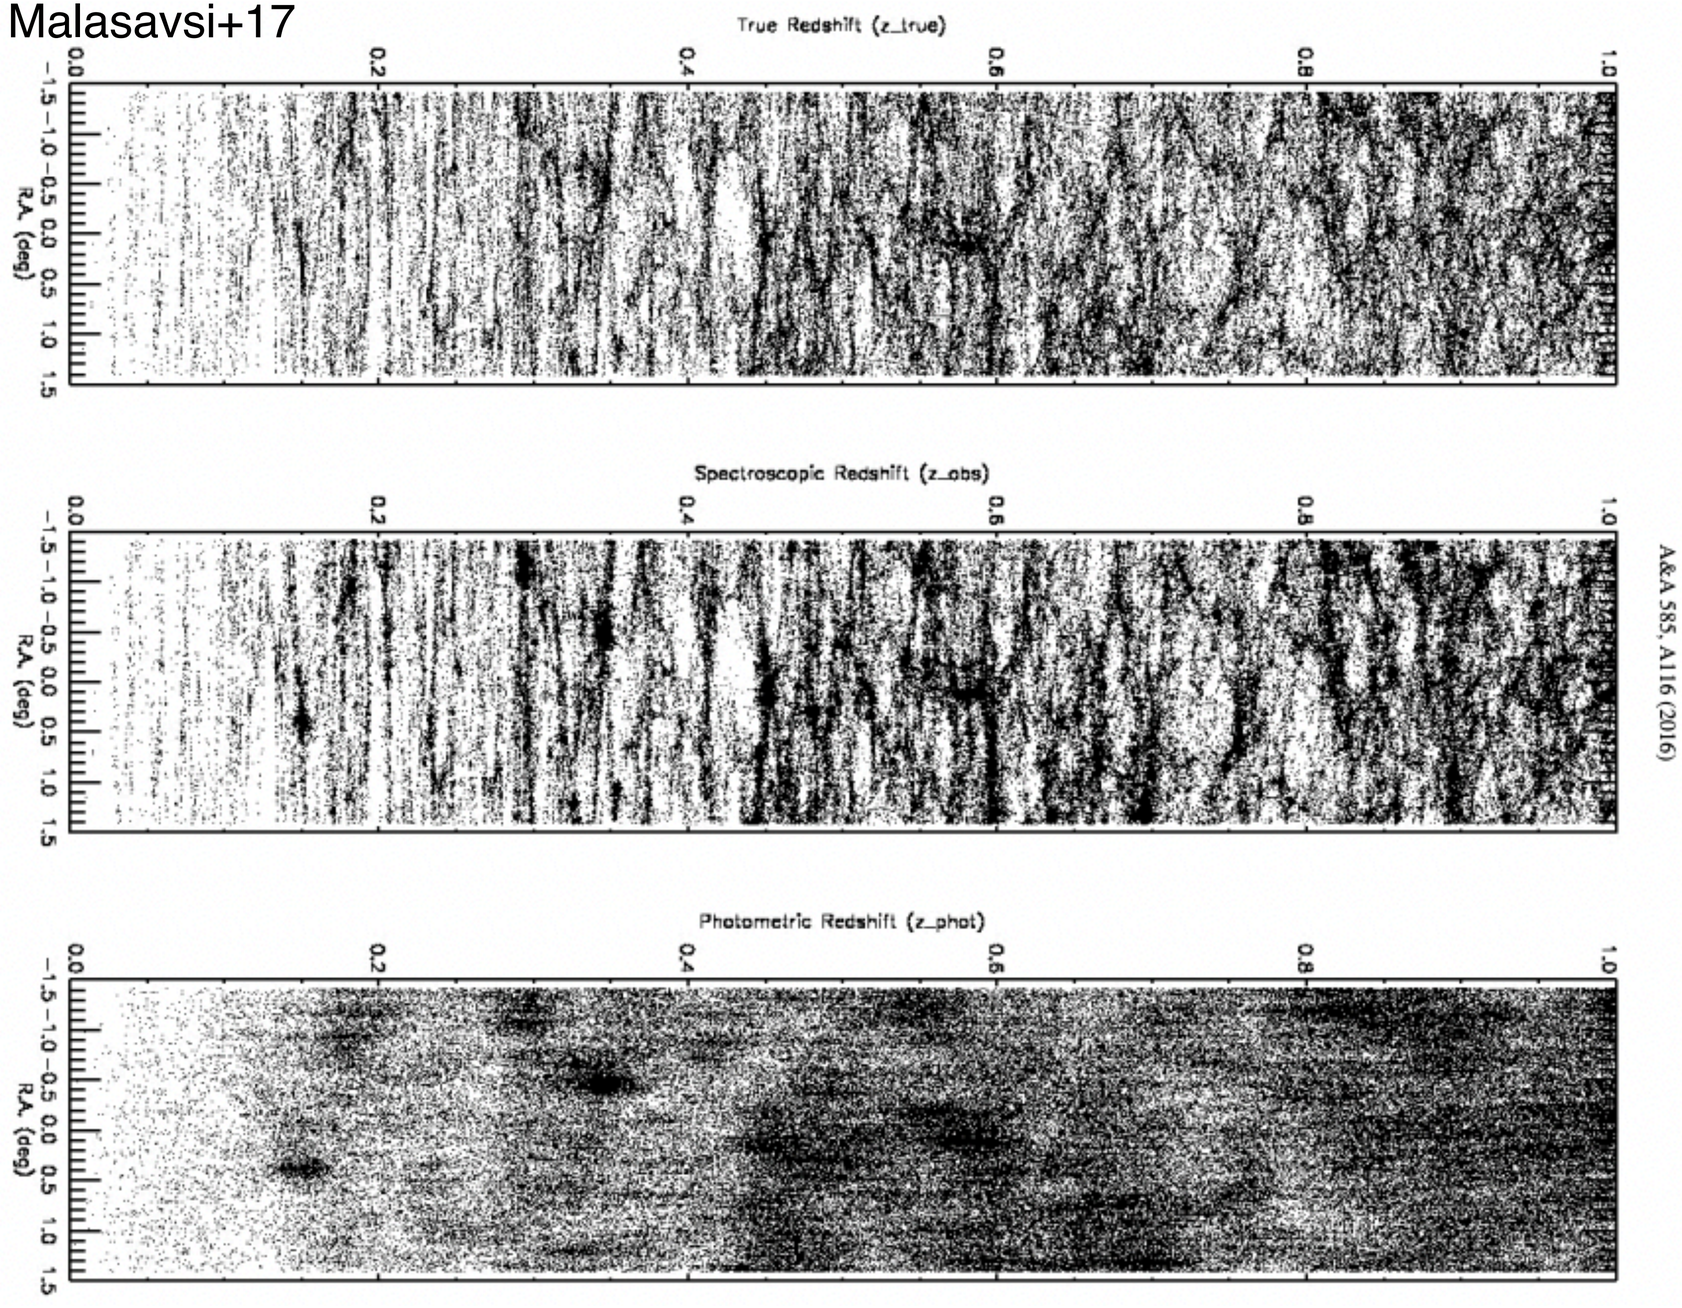
The effect of redshift measurement uncertainties

Malasavsi+17



A&A 585, A116 (2016)

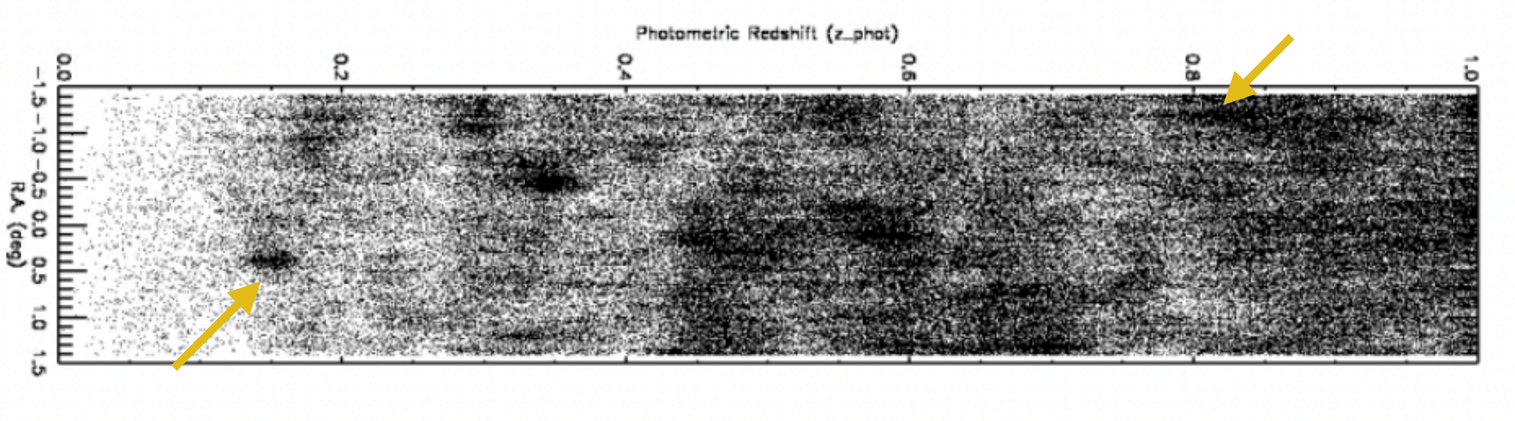
Uncertainties + peculiar velocities smear out the spatial distribution

Challenges

- Trace the cosmic web using galaxy surveys

  In spectroscopic surveys : need good sampling to trace the filaments of the cosmic web.
  This is a challenge for the *Euclid* survey.

  In photometric surveys — need to deal with the uncertainty on the individual redshift of galaxies



Studying cluster galaxy properties with photometric redshifts is challenging → We do not know which galaxy belongs to each cluster … **Statistical inference**
